## Project Description

Project that builds on top of the Session 6 homework: Build a simple webscraper.

The project scrapes all the urls from the Wikipedia page:

[https://en.m.wikipedia.org/wiki/List\\_of\\_dragons\\_in\\_mythology\\_and\\_folklore](https://en.m.wikipedia.org/wiki/List_of_dragons_in_mythology_and_folklore)

And then scrapes all the images from each of the pages in the main page.

A sample of the images are used as an input for the stable diffusion model, 'sd-image-variations-diffusers'.
